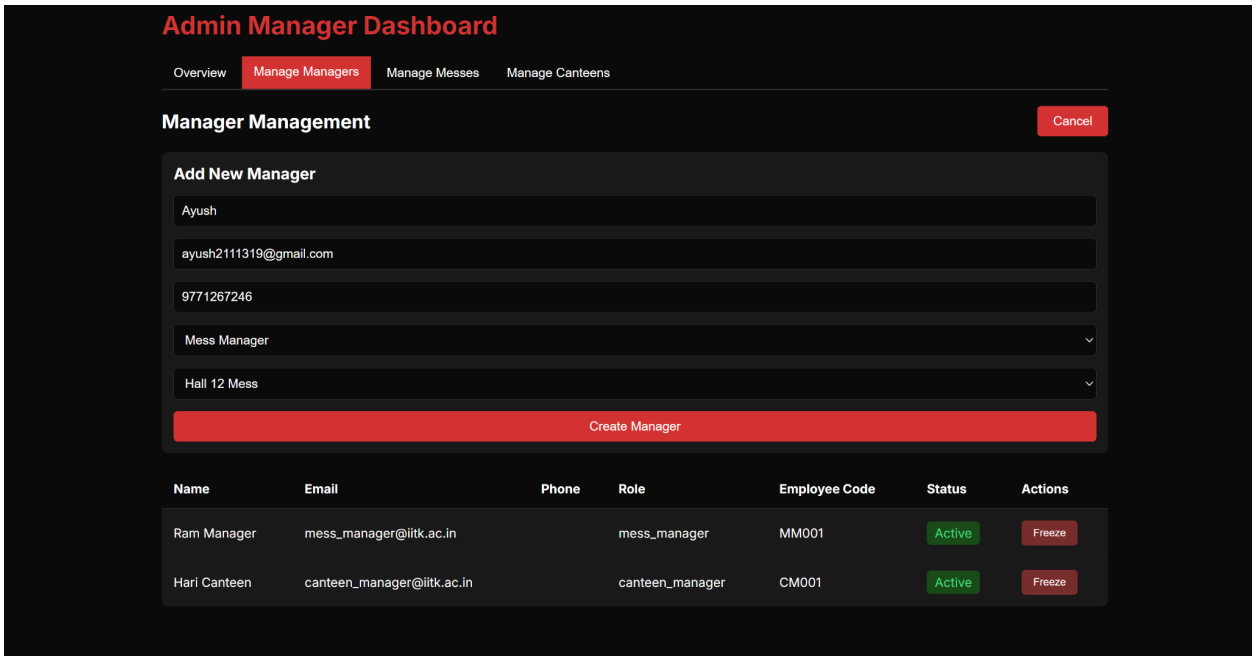
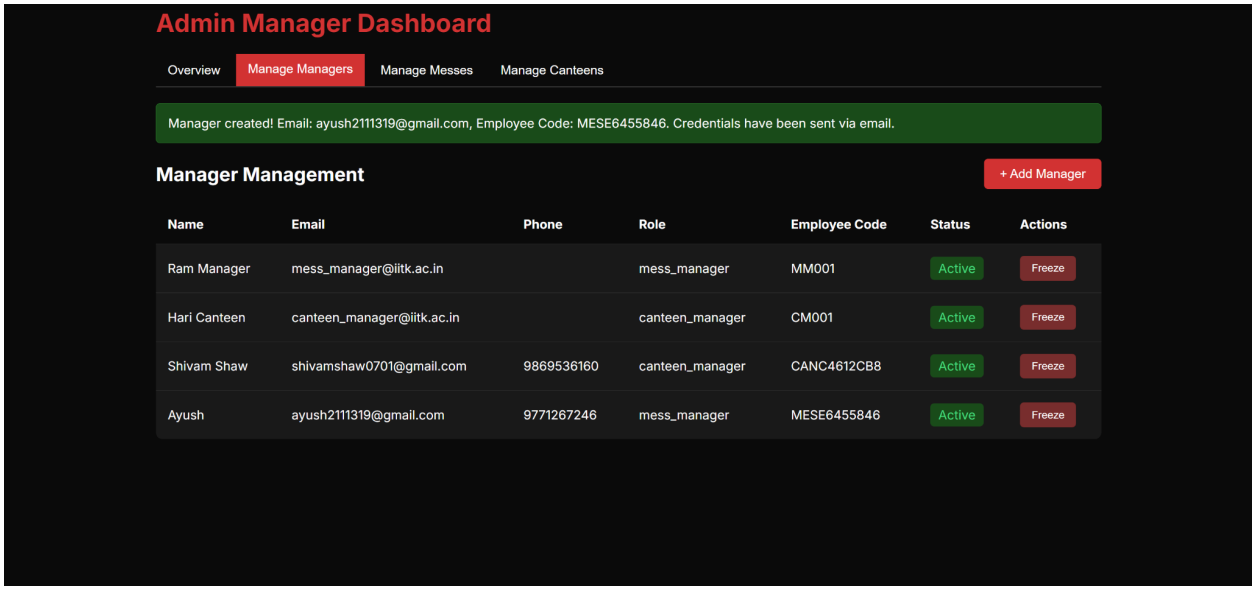
1. Mess Manager Dashboard

Step 1: Creating a Mess Manager (Admin Panel)

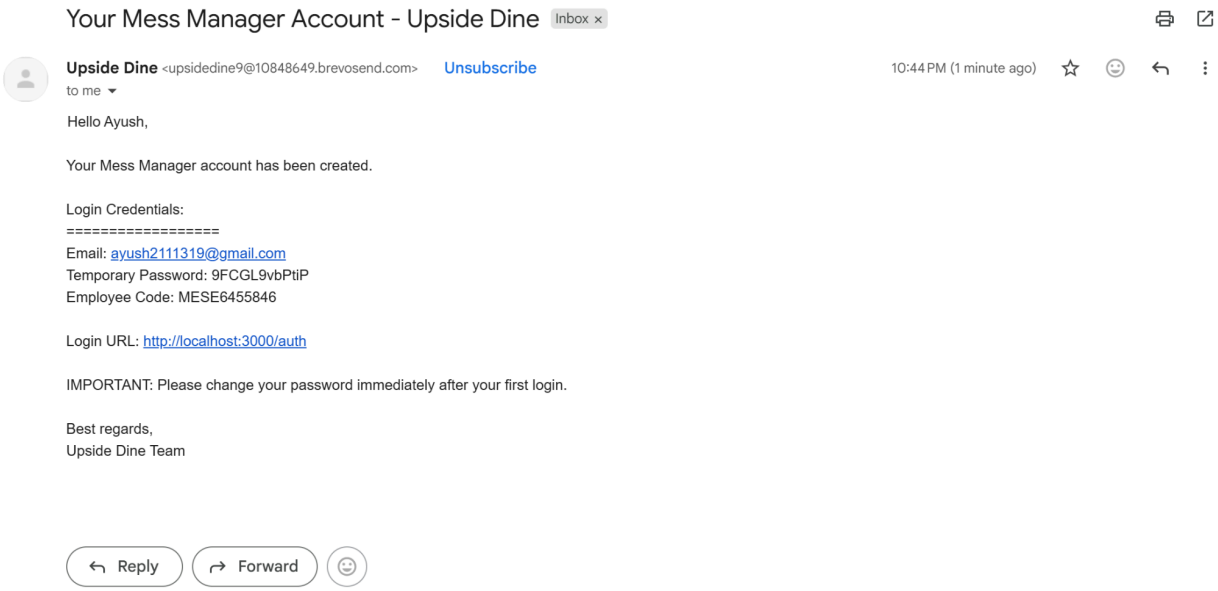
- The Admin is responsible for creating a Mess Manager account through the admin dashboard.
- Once the account is created, the system automatically sends login credentials (email ID and temporary password) to the registered email address of the Mess Manager.
- This ensures secure onboarding without manual credential sharing.



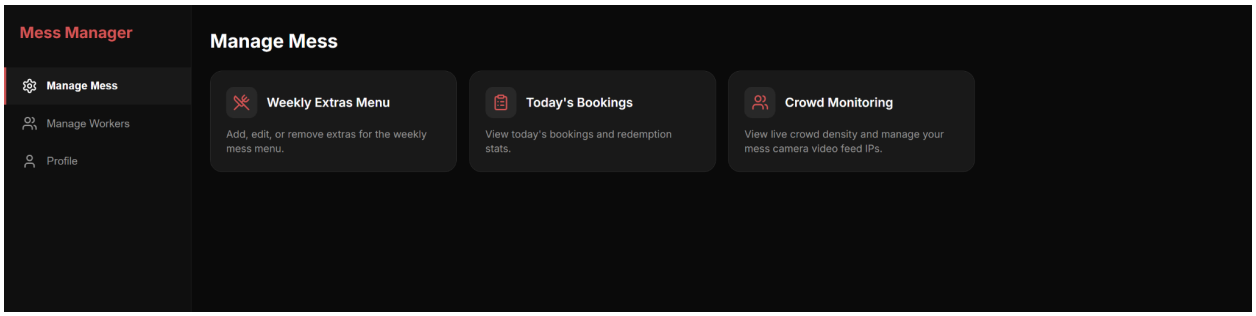


Login & Security

- The Mess Manager logs into the system using:
  - Registered email ID
  - Temporary password received via email
- Upon first login, the system prompts the user to reset their password for security purposes.
- This ensures that only the authorized manager gains access to the dashboard.

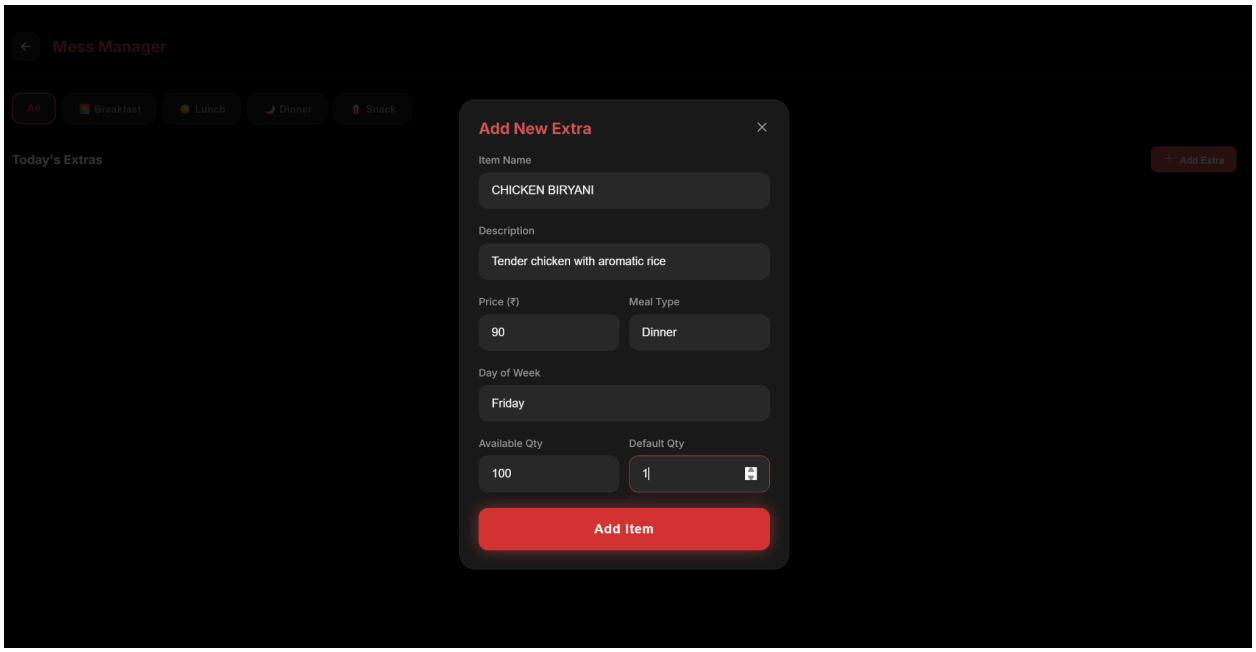


Mess Dashboard Features



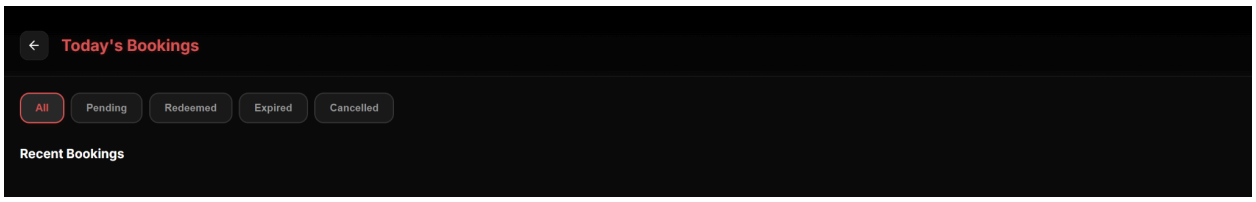
1. Weekly Extras Menu

- The Mess Manager can manage the weekly extras menu efficiently.
- Functionalities include:
    - Adding new extra dishes to specific days of the week
    - Updating or modifying existing dishes
    - Adjusting the quantity/availability of each extra item per day
- This allows dynamic control over menu planning based on demand and availability.



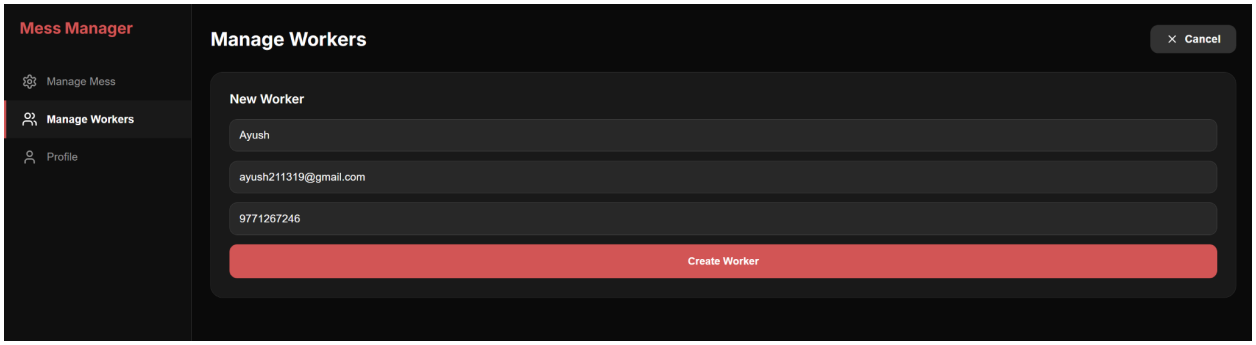
2. Today's Bookings

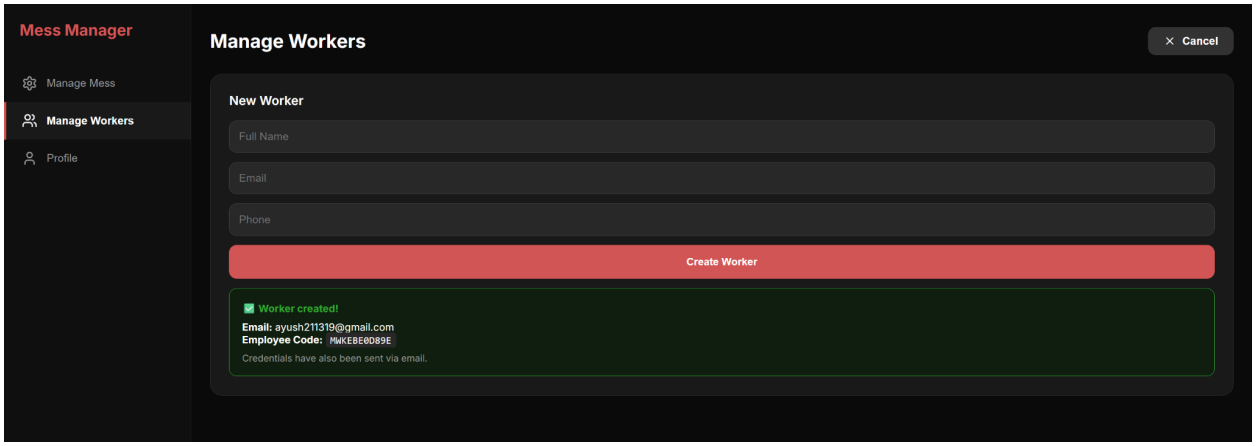
- **The dashboard provides a structured view of all bookings made by students.**
- **Bookings are categorized into the following sections:**
    - **All – Displays every booking**
    - **Pending – Bookings yet to be redeemed**
    - **Redeemed – Successfully used bookings**
    - **Expired – Bookings that were not used within the valid time**
    - **Cancelled – Bookings cancelled by students**
- **This classification helps the manager quickly filter and monitor booking activity.**

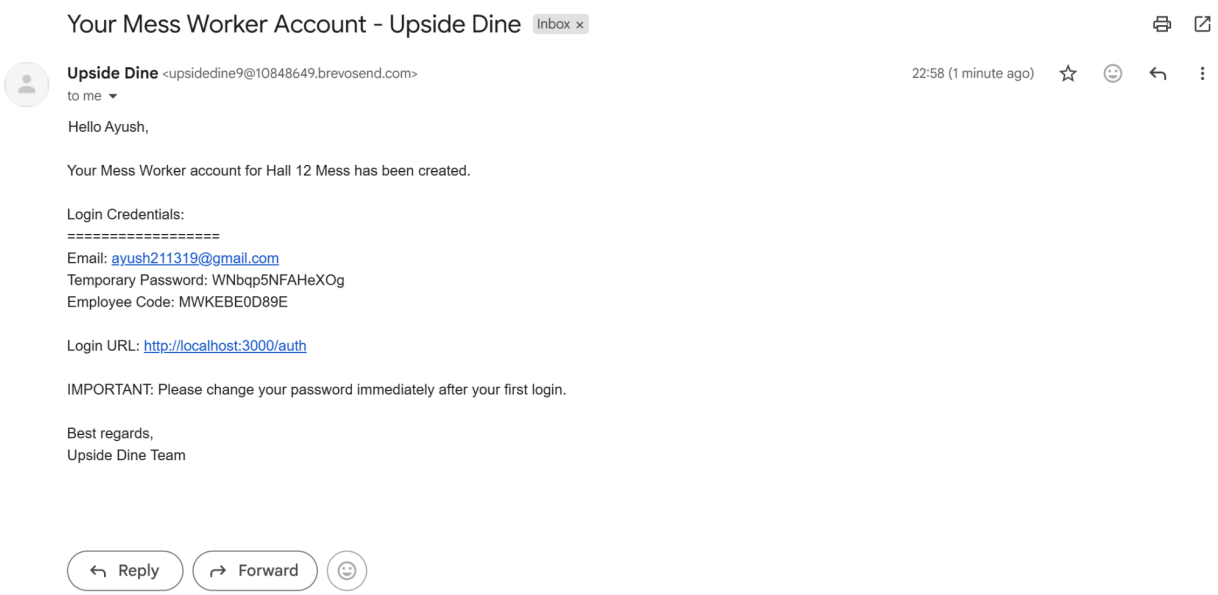


3. Worker Management

- Mess Managers can add and manage workers within the system.
- When a worker is created:
    - The system automatically sends login credentials to the worker's email.
- This ensures a smooth onboarding process for staff members.

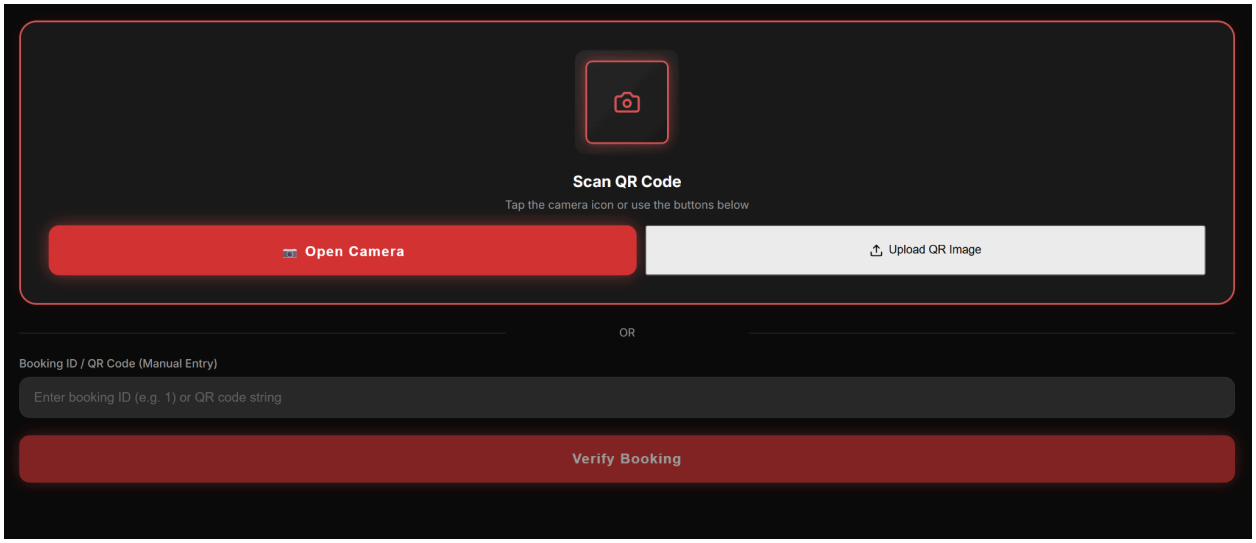






Booking Verification by Workers

- Workers are responsible for verifying student bookings at the time of service.
- The system supports two verification methods:
  - **QR Code Verification**
    - Scan using device camera
    - Upload QR image for validation
  - **Manual Verification**
    - Enter Booking ID directly into the system
- This dual approach ensures flexibility and reliability during verification.

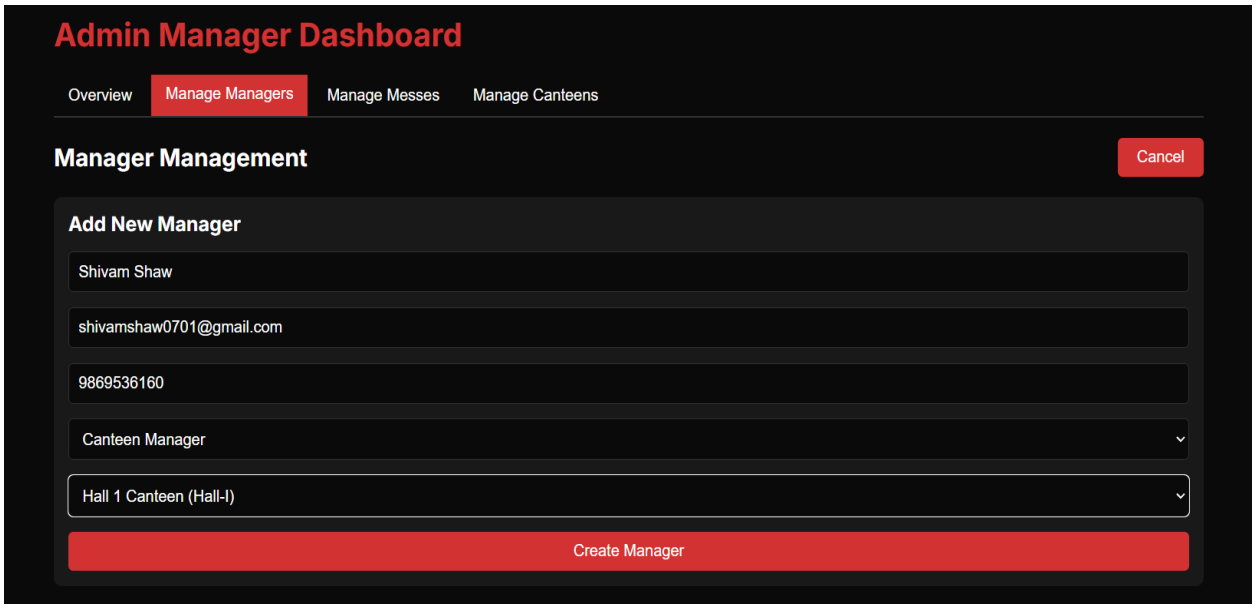


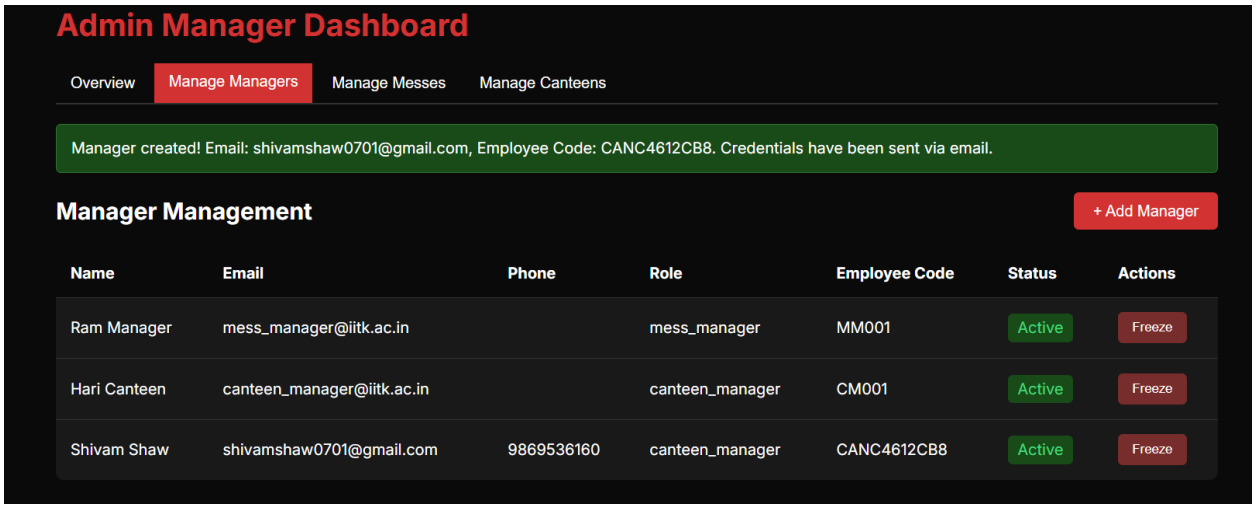
2. Canteen Manager Dashboard

Step 1: Creating a Canteen Manager (Admin Panel)

- The Admin creates a Canteen Manager account through the admin interface.
- Login credentials are automatically sent to the manager's email.

.





Login & Security

- The Canteen Manager logs in using:
  - Email ID
  - Temporary password
- Password reset is required after the first login to maintain account security.

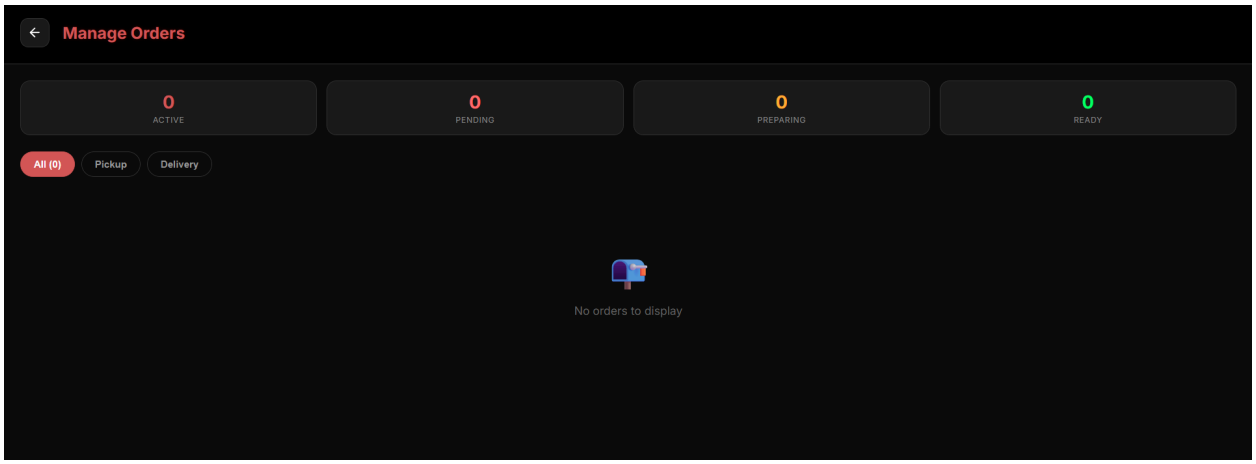
2. Active Orders

- Displays all ongoing and active orders placed by students.
- Helps the manager:
  - Track order flow
  - Manage preparation and delivery efficiently

Manage Orders Overview

- The **Manage Orders** section provides a centralized view of all incoming and processed orders.
- Orders are displayed in categorized tabs for easy tracking and handling.



Order Categories

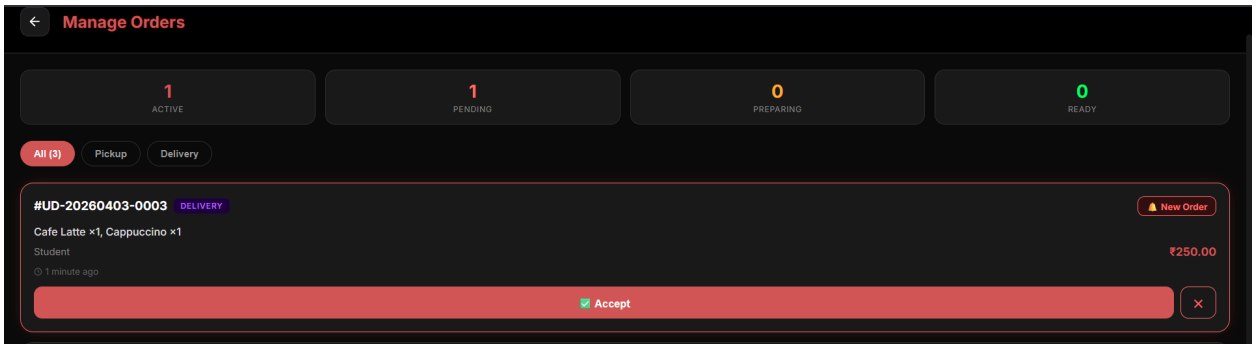
Orders are grouped into the following stages:

- **All** – Displays every order irrespective of status
- **Pending** – Newly placed orders awaiting action
- **Preparing** – Orders currently being prepared in the kitchen
- **Ready** – Orders that are prepared and ready for pickup or delivery
- A summary panel at the top shows the **count of orders in each category**, helping managers quickly assess workload.

Order Processing Flow

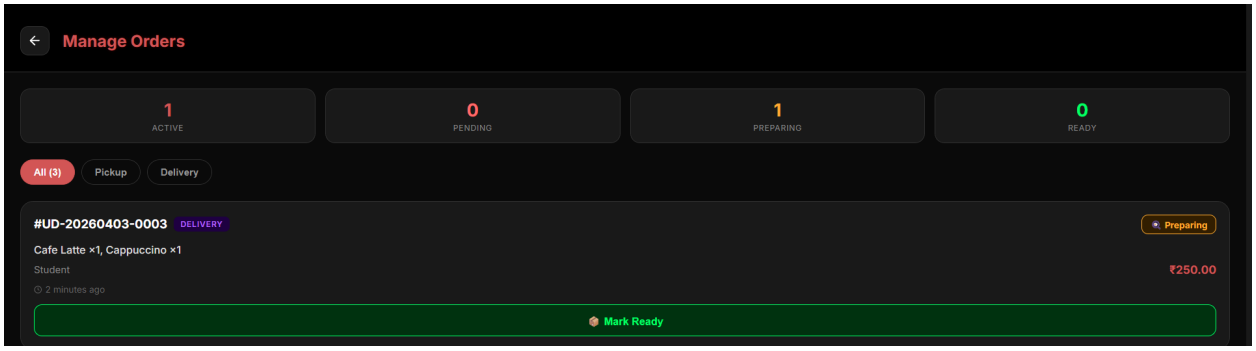
1. Accepting an Order

- When a new order appears in the **Pending** section:
  - The manager can review order details (items, quantity, total price).
  - Clicking **Accept** moves the order to the next stage.
- This confirms that the kitchen has started processing the order.
- Once accepted:
  - The order status updates internally to indicate it is being prepared.
- This stage ensures the kitchen workflow is aligned with incoming demand.



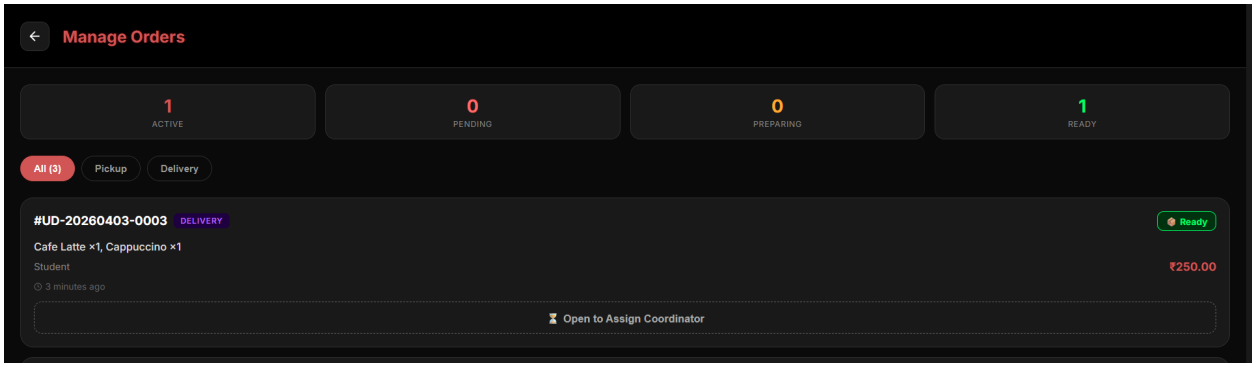
2. Marking Order as Ready

- After preparation is complete:
  - The manager clicks **Mark Ready**
- This updates the order status to **Ready**, indicating:
  - The order is ready for pickup OR
  - Ready to be assigned for delivery



3. Ready State (Pre-Delivery)

- Orders marked as ready show:
  - A **Ready status indicator**
  - Option to assign delivery staff (if delivery type)
- If no delivery partner is assigned:
  - The system indicates that assignment is pending



4. Order Completion

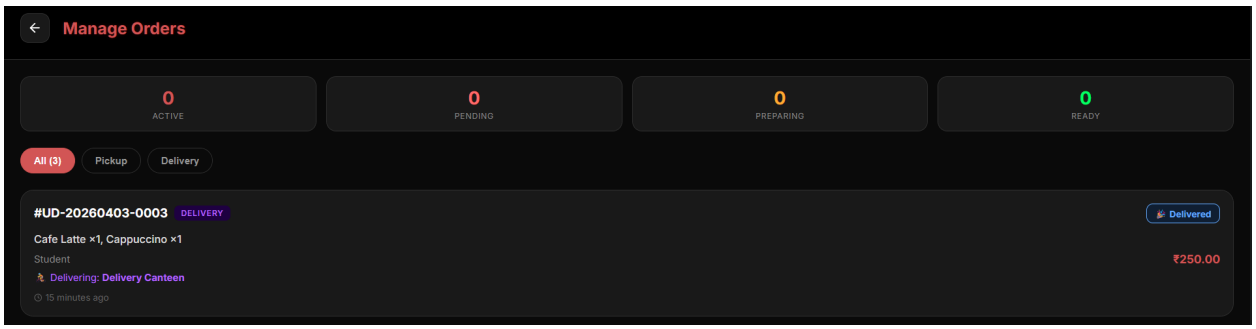
- Once the order is handed over (picked up or delivered):
  - It transitions out of active workflow
- This ensures only relevant active orders are displayed in the dashboard.

Order Card Details

Each order card provides key information at a glance:

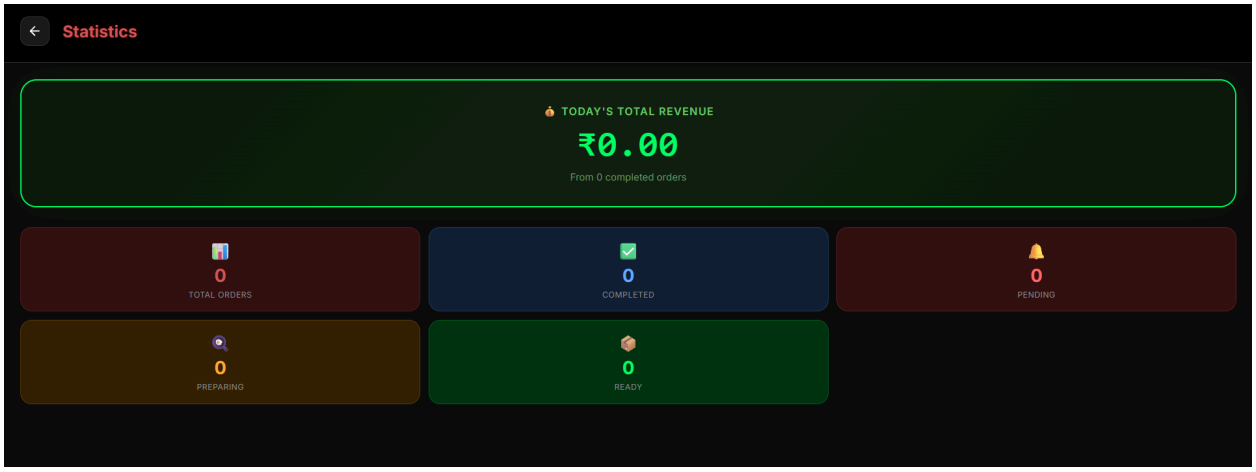
- **Order ID**
- **List of items ordered**
- **Order type** (Delivery/Pickup)

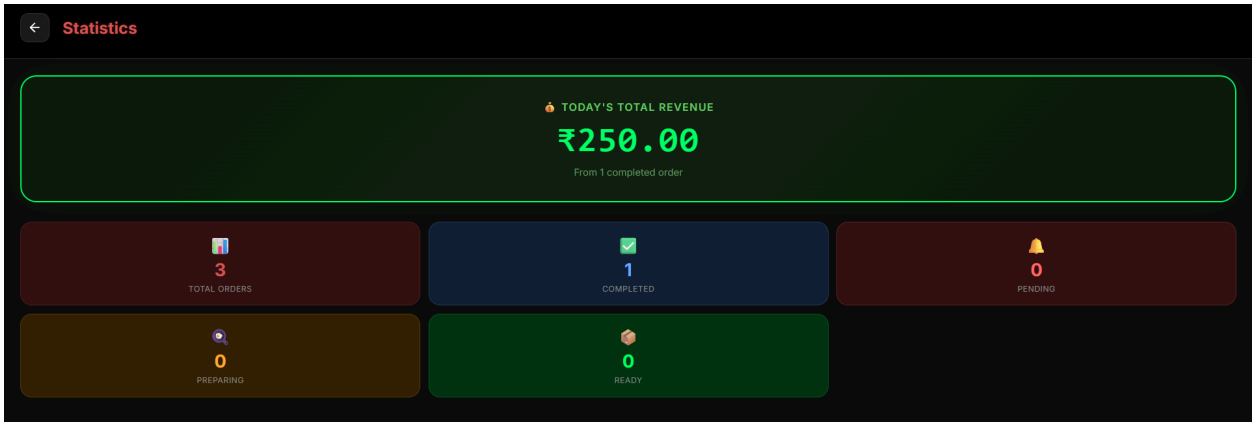
- **Total amount**
- **Current status indicator**
- **Action buttons** (Accept, Mark Ready, etc.)



3. Revenue & Analytics

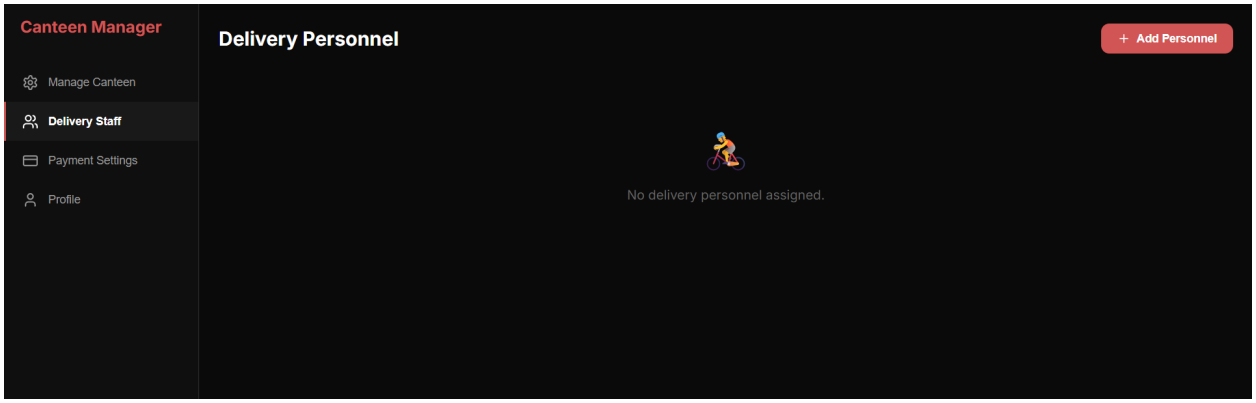
- Provides insights into:
  - Total revenue generated
  - Order statistics and performance trends
- Enables better decision-making based on operational data.

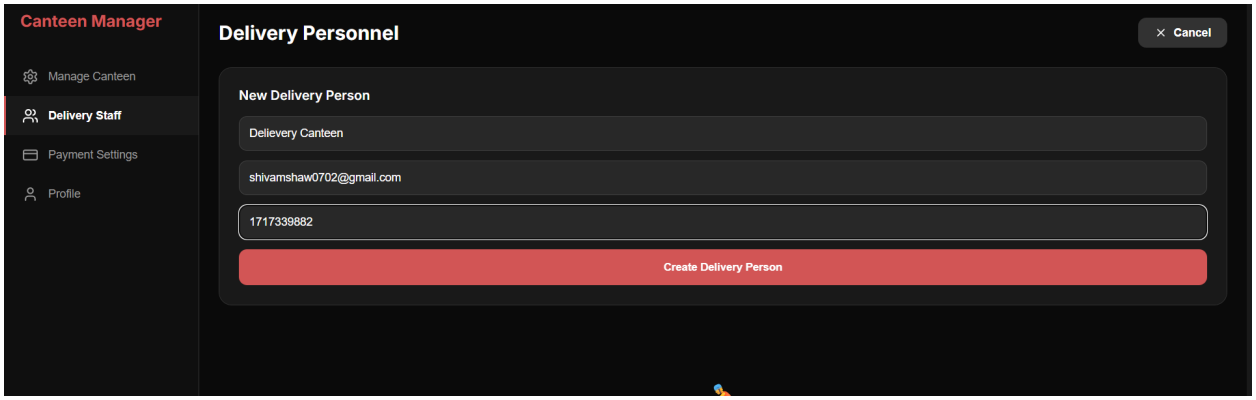


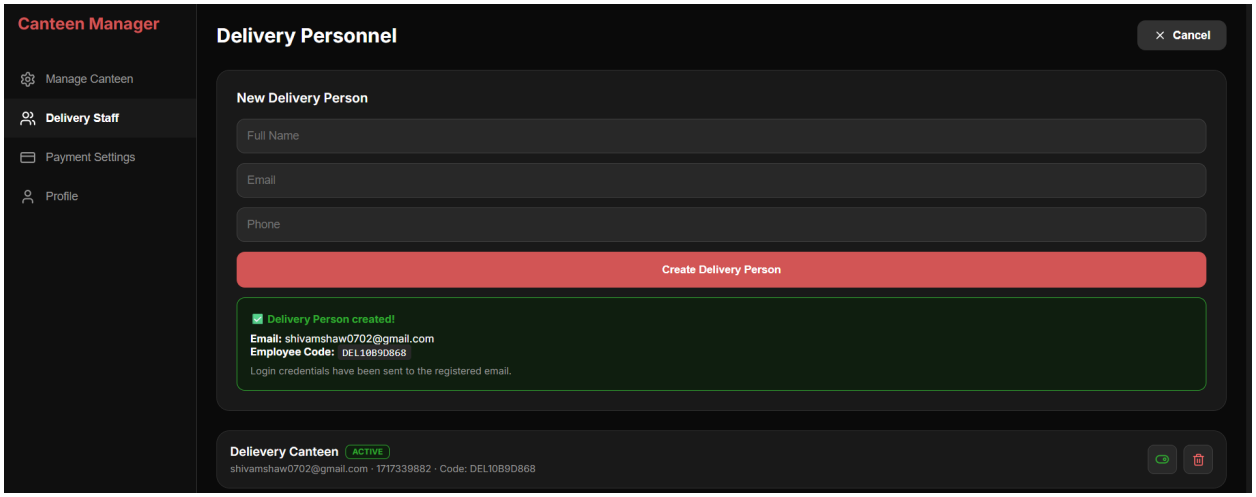


4. Delivery Staff Management

- Managers can add and manage delivery personnel.
- Upon adding a delivery staff member:
    - Credentials are automatically sent via email
- Ensures proper coordination between order preparation and delivery.



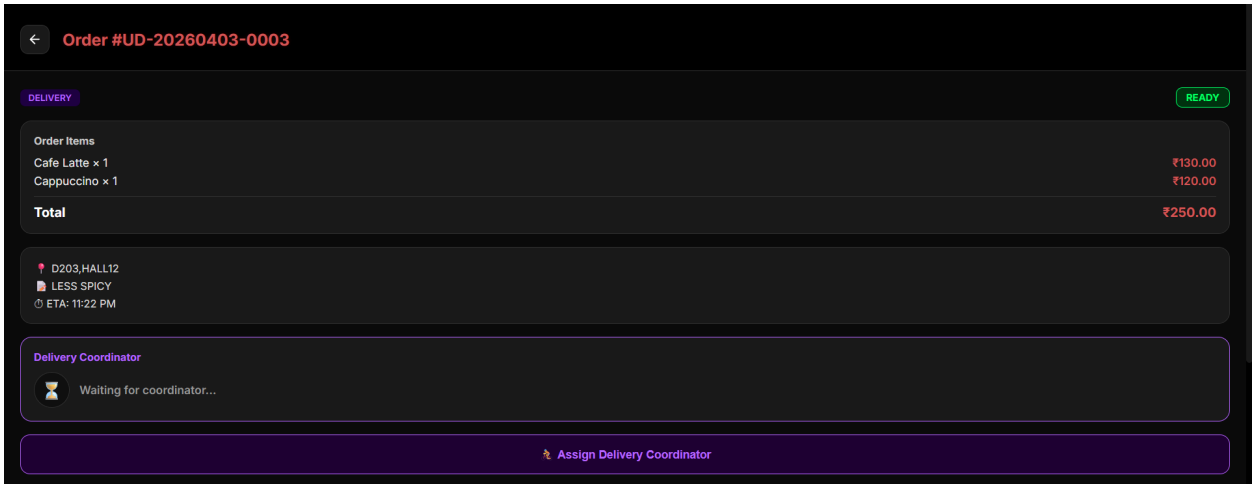




Order Management & Delivery Assignment

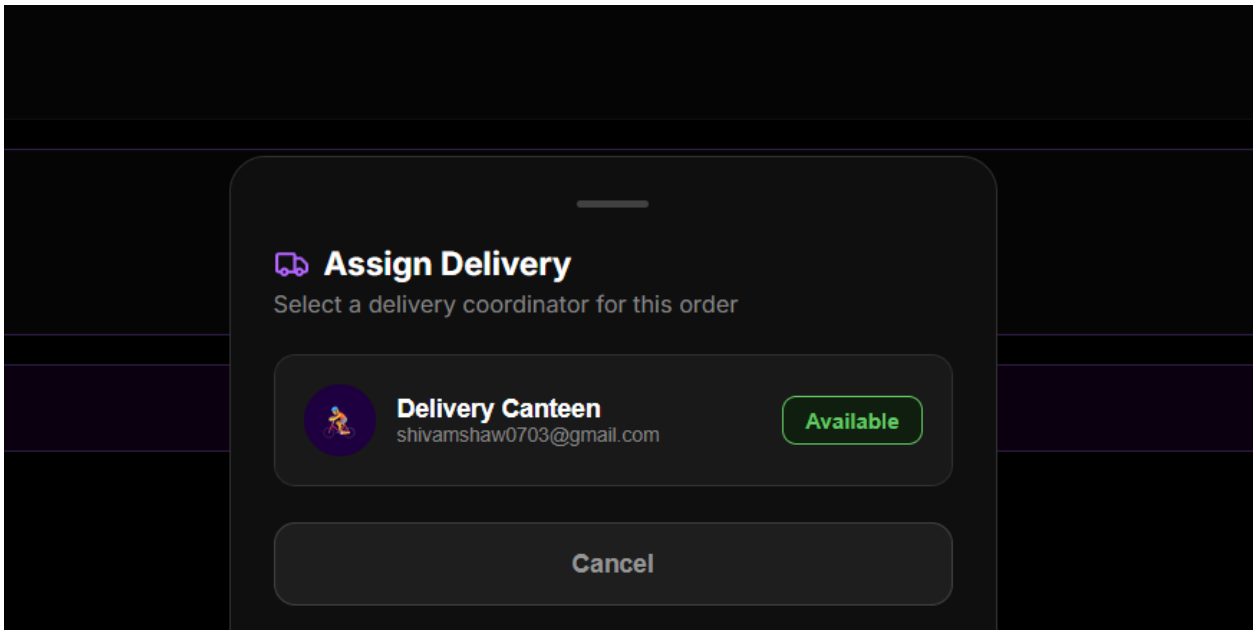
Order Details View

- Displays complete order information including:
  - Order ID
  - Items ordered with quantity
  - Total amount
  - Delivery type (e.g., Delivery/Pickup)
- Shows additional details such as:
  - Delivery location (e.g., hostel/room)
  - Special instructions (e.g., less spicy)
  - Estimated delivery time (ETA)



Assign Delivery Coordinator

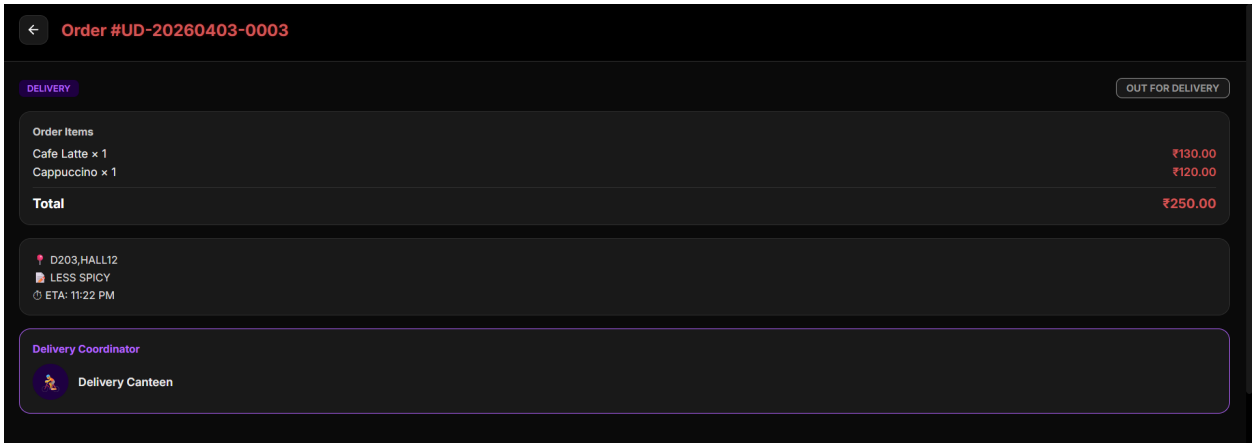
- Once an order is marked **Ready**, the manager can assign a delivery coordinator.
- A popup interface is displayed showing:
  - List of available delivery staff
  - Staff name and email
  - Availability status (e.g., Available)
- The manager can:
  - Select a delivery person
  - Confirm assignment
- If not assigned, the system indicates that delivery is pending.



Order Status Tracking (Manager View)

Real-Time Status Indicator

- Each order includes a status label such as:
  - **Ready**
  - **Out for Delivery**
  - **Delivered**
- This helps managers:
  - Track order progress
  - Identify pending actions (e.g., delivery assignment)



Detailed Order Timeline

- Orders follow a structured lifecycle:
  - **Order Placed**
  - **Order Confirmed**
  - **Preparing**
  - **Ready**
  - **Out for Delivery**
  - **Delivered**
- A vertical progress tracker visually represents these stages.
- Managers can instantly see the current stage of any order.

Manage Orders – Delivery State

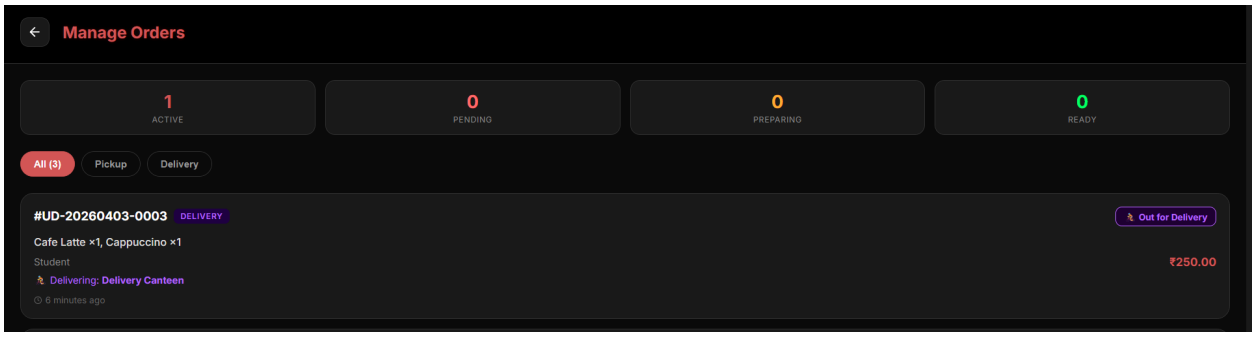
Delivery Pending State

- When an order is ready but not yet assigned:
  - It appears with an indicator like **"Needs Delivery Coordinator"**
- Helps managers quickly identify unassigned deliveries.

Delivery Staff Dashboard

Deliveries Overview

- Delivery staff can view a summary including:
  - **Delivered Orders Count**
  - **Available Deliveries**
  - **Total Earnings**



Delivery Verification (OTP-Based)

OTP Confirmation

- Before completing delivery:
  - Delivery staff must enter a **student-provided OTP**
- OTP input ensures:
  - Secure handoff
  - Prevention of incorrect deliveries

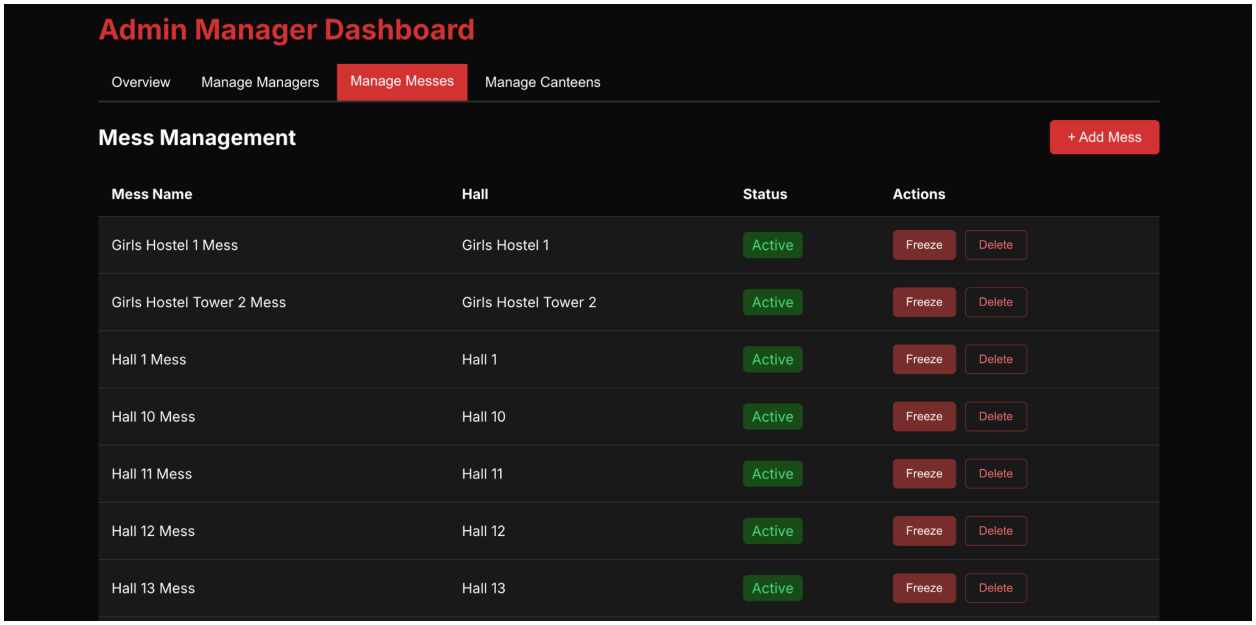
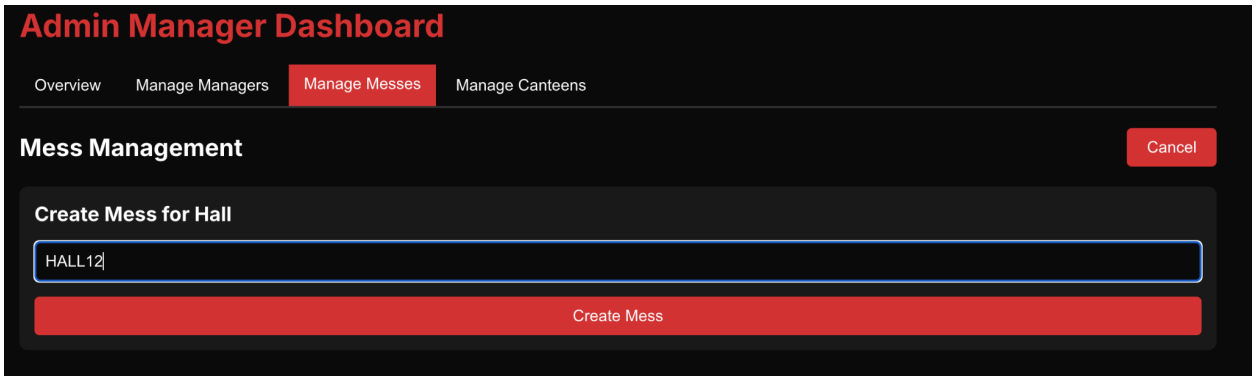
ADMIN MANAGER DASHBOARD

Key Functions

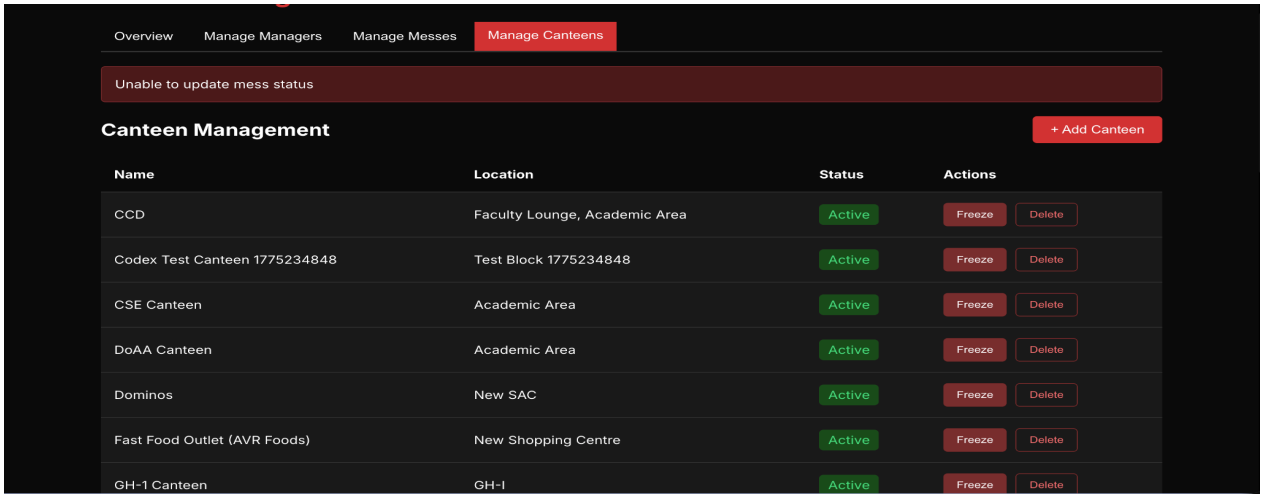
- **Add new Mess facilities.**
- **Add new Canteens/Food Outlets.**
- **Manage overall system operations.**

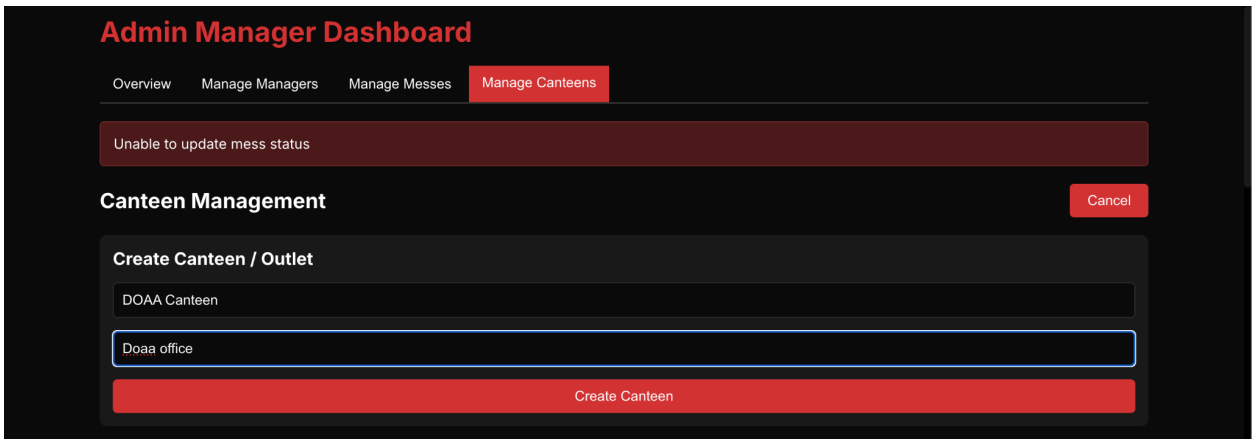


Adding New Mess



Adding New Canteen





Student Dashboard – Home Interface

Personalized Home Screen

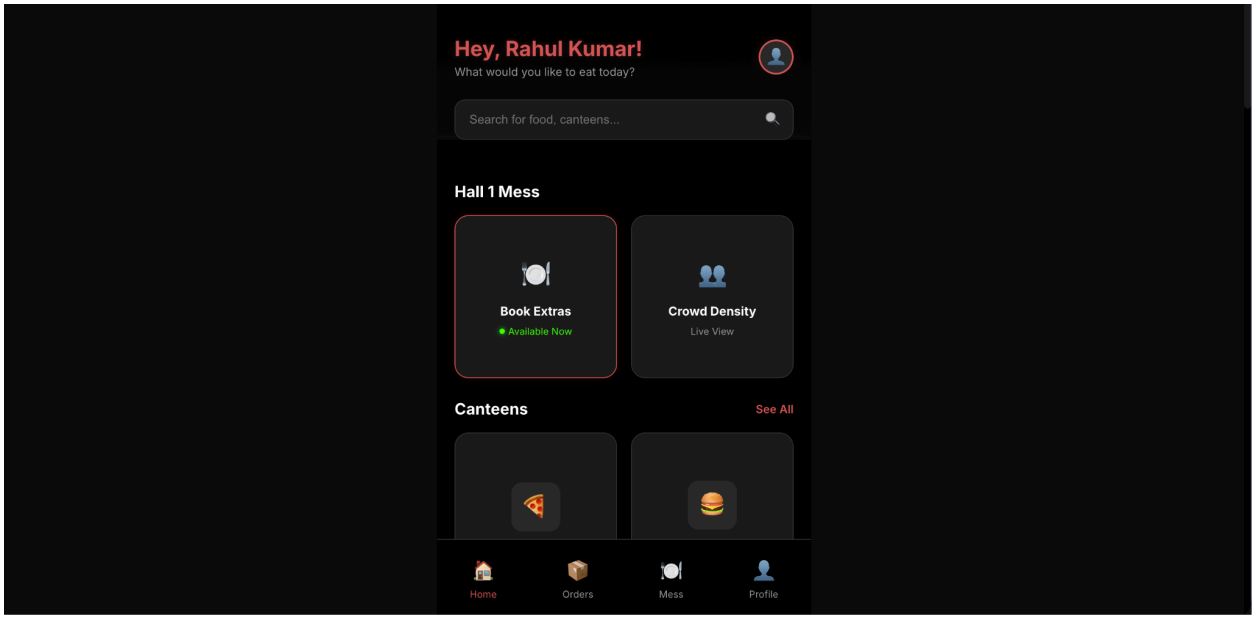
- The student dashboard opens with a personalized greeting (e.g., *"Hey, Rahul Kumar!"*).
- A search bar is provided to:
  - Search for food items
  - Explore available canteens

Quick Access Features

- Students are provided with quick action cards for:
  - **Book Extras** – Direct access to mess extra meal booking
  - **Crowd Density** – View live mess occupancy (if available)
- These shortcuts improve accessibility and reduce navigation time.

Canteen Section

- Displays available canteens/food outlets.
- Students can:
  - Browse options
  - Navigate to detailed menus
- A **"See All"** option allows viewing all listed outlets.



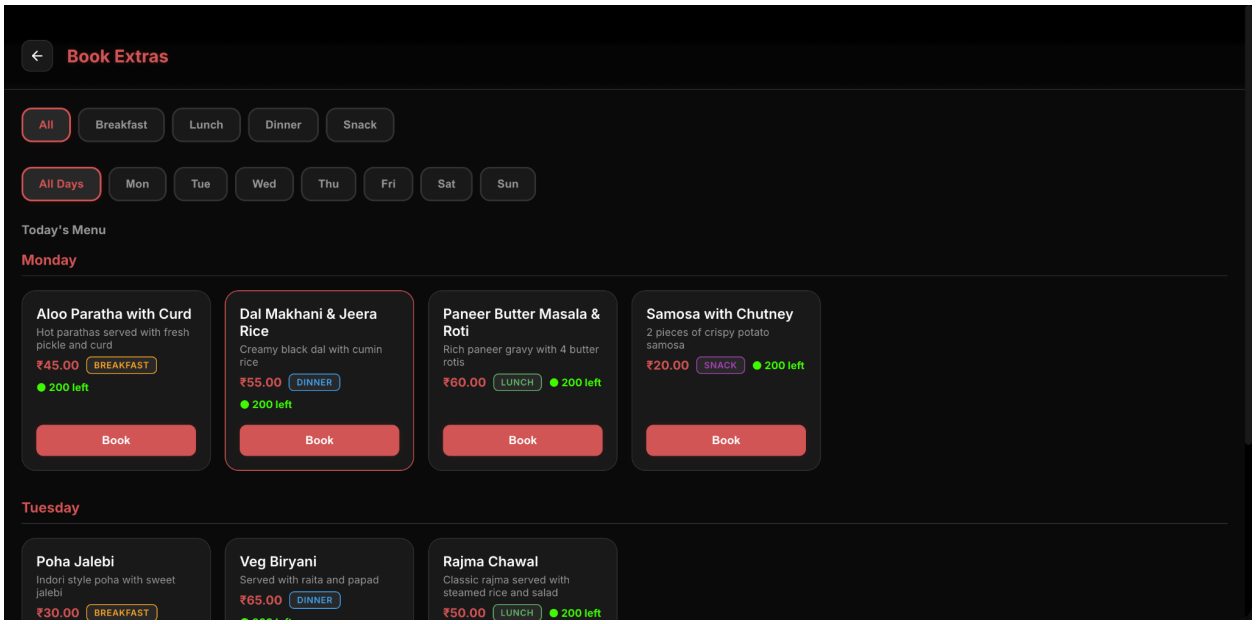
Mess Extras Booking

Category-Based Filtering

- Students can filter meals based on:
  - **Meal Type**: Breakfast, Lunch, Dinner, Snacks
  - **Day of the Week**: Monday to Sunday
- This helps in quickly finding relevant food options.

Menu Display

- The interface shows **day-wise menus** with multiple dishes.
- Each item card includes:
  - Dish name
  - Short description
  - Price
  - Meal category (e.g., Breakfast, Lunch)
  - Availability count (e.g., “200 left”)



Booking an Item

- Each dish has a **“Book”** button.
- Students can:
  - Select desired items
  - Instantly book extras based on availability
- The availability indicator ensures:
  - No overbooking
  - Real-time stock visibility

Dynamic Availability

- The system updates the remaining quantity of each item.
- Helps students make quick decisions based on:
  - Demand
  - Remaining slots

Mess Extras Booking – Confirmation Flow

Booking Interface (Popup View)

- When a student clicks on **"Book"**, a confirmation popup is displayed.
- The popup provides complete details of the selected item:
  - Dish name (e.g., *Dal Makhani & Jeera Rice*)
  - Price per item
  - Short description

Quantity Selection

- Students can adjust the quantity using:
  - **Increase (+)** button
  - **Decrease (–)** button
- The system dynamically updates the **total amount** based on the selected quantity.

Booking Confirmation

- The popup displays:
  - Total payable amount
  - A **"Confirm Booking"** button
- Once the student confirms:
  - The booking is successfully created
  - The request is recorded in the system

Billing Note

- A note is displayed informing that:
  - The amount will be added to the **monthly mess bill**
  - No immediate payment is required
- This ensures clarity in billing and avoids confusion.

QR Code Generation & Booking Validation

Booking Confirmation Screen

- After successful booking, a **QR Code** is generated.
- This QR code acts as a **digital token** for redeeming the meal.

QR Code Details

- The screen displays:
  - QR Code (unique for each booking)
  - Dish name
  - Booking ID
  - Validity timer (countdown)

Time-Based Validity

- The QR code is valid only for a limited time.
- A countdown timer (e.g., *00:23:33*) is shown to:
  - Ensure timely redemption
  - Prevent misuse or reuse

Booking Information Panel

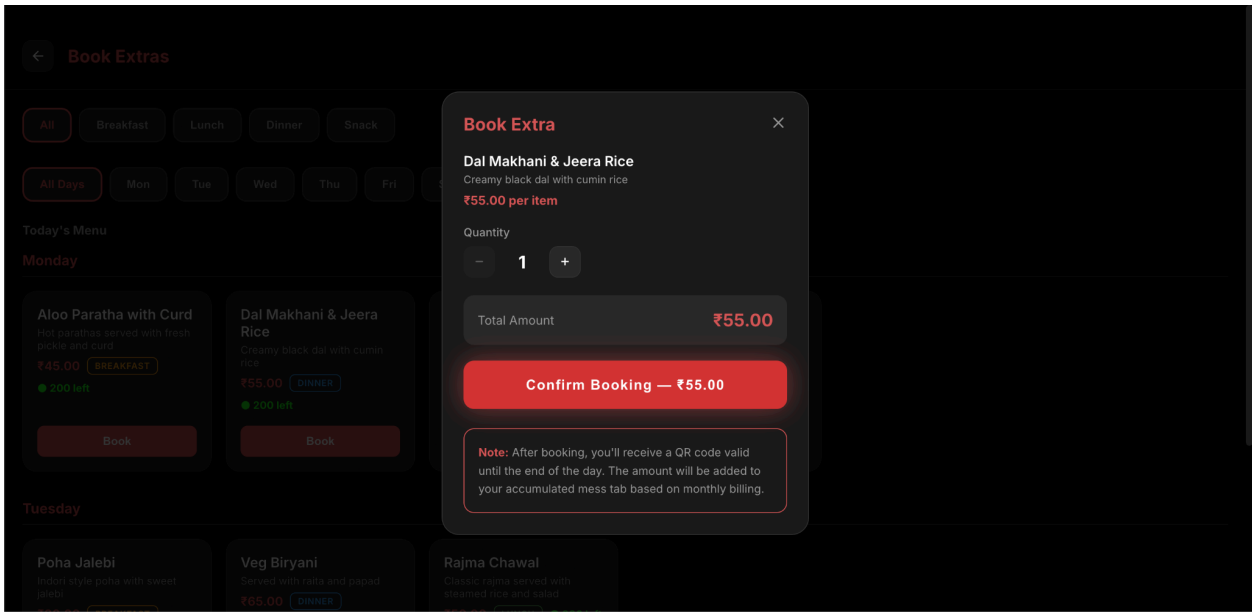
- Additional details include:
  - Total amount
  - Quantity booked
  - Meal type (e.g., Lunch)
  - Expiry time

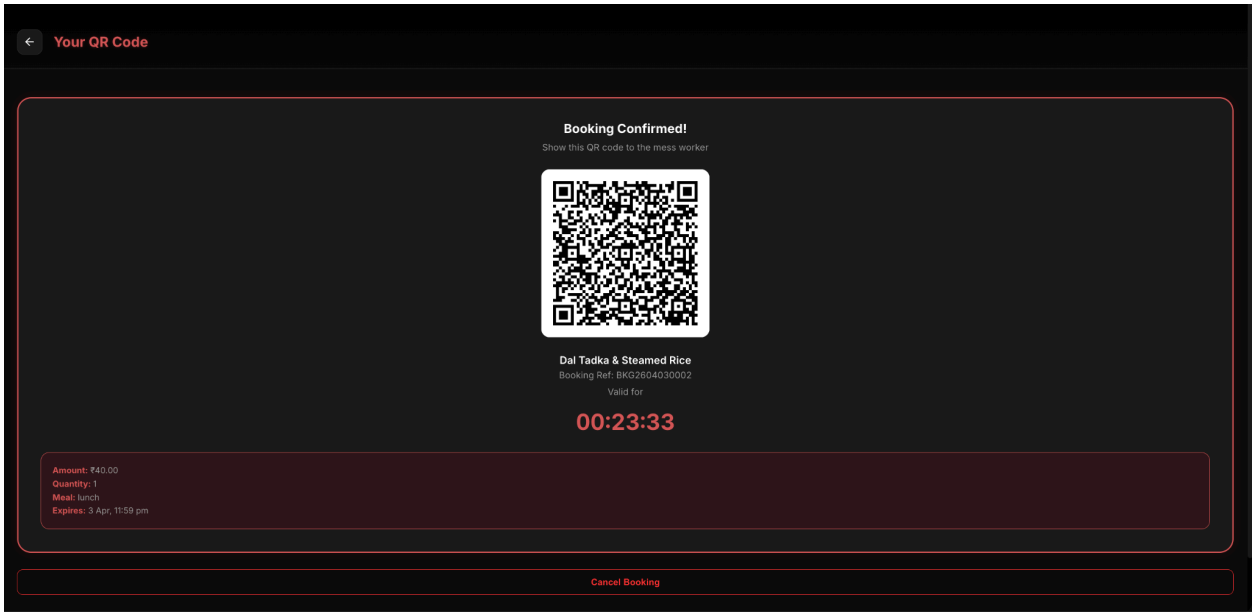
Cancellation Option

- Students are provided with a **"Cancel Booking"** option.
- Allows flexibility in case of change in plans (before expiry).

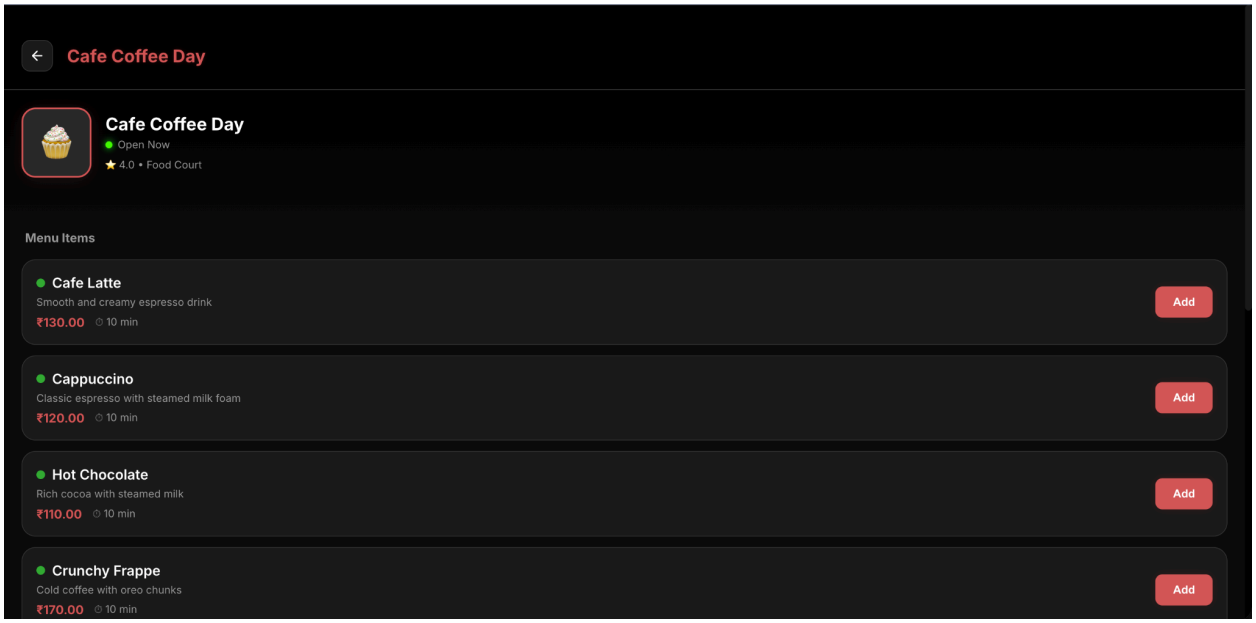
Redemption Process

- At the mess counter:
  - The student presents the QR code
  - The worker scans or verifies it
- Upon successful verification:
  - The booking is marked as **Redeemed**





CANTEEN/FOOD OUTLET ORDERING



Cart Management

Cart Overview

- The cart screen displays all selected items before placing an order.
- Each item entry includes:
  - Item name (e.g., *Cafe Latte, Cappuccino*)
  - Price per item
  - Selected quantity
  - Individual item total

Quantity Control

- Students can modify item quantities using:
  - **Increase (+)** button
  - **Decrease (–)** button
- The total price updates dynamically based on quantity changes.

Item Removal

- Each item has a delete option to remove it from the cart.
- A **"Clear Cart"** option is also available to remove all items at once.

Order Summary

- Displays:
  - Subtotal of all items
  - Final total amount
- A **"Checkout"** button allows users to proceed to the next step.

Checkout Process

Order Type Selection

- Students can choose between:
  - **Pickup** – Self-collection from the canteen
  - **Delivery** – Food delivered to specified location

Delivery Details

- If **Delivery** is selected:
  - Students must enter/select a delivery address
    (e.g., hostel and room number like *D203, Hall 12*)

Special Instructions

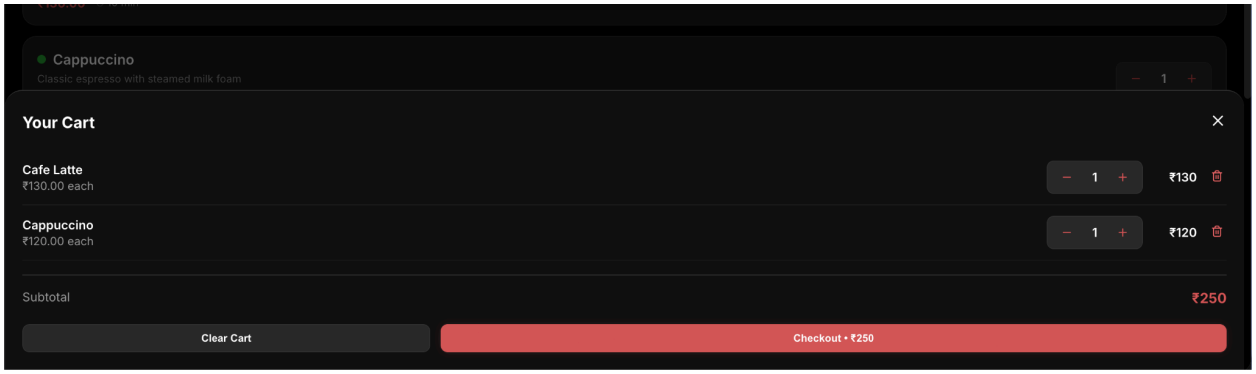
- An optional field allows students to add preferences such as:
  - "Less spicy"
  - "No onions"
- These instructions are visible to the kitchen for customization.

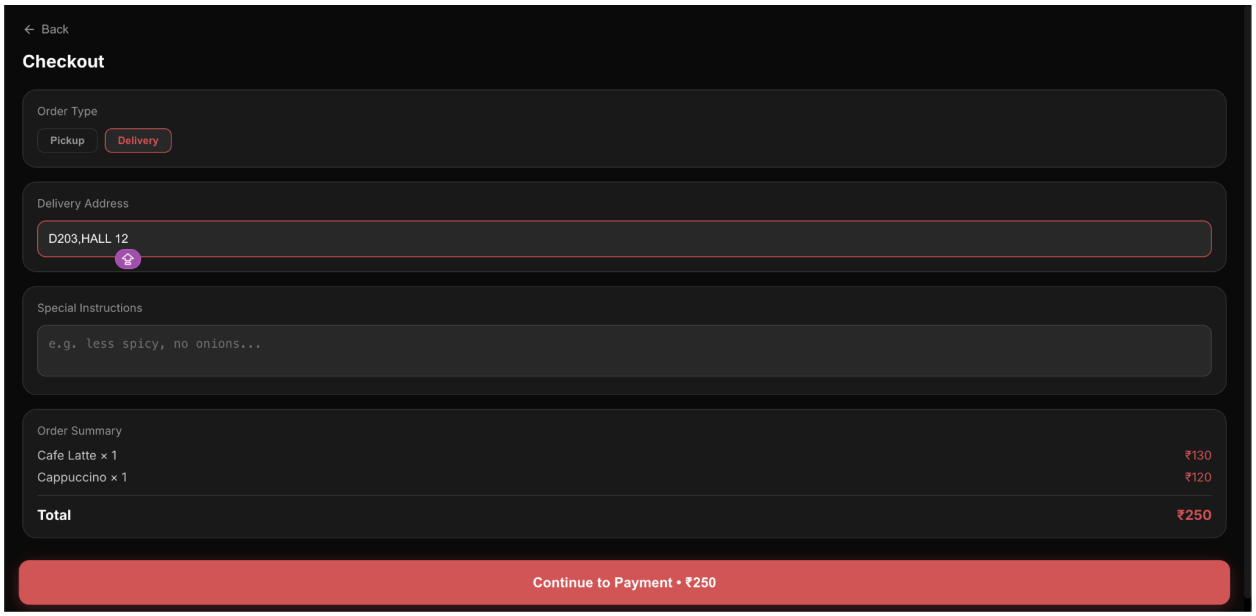
Order Summary (Final Review)

- Before payment, the system shows:
  - List of selected items
  - Individual item prices
  - Final payable amount
- This ensures the user can verify the order before proceeding.

Proceed to Payment

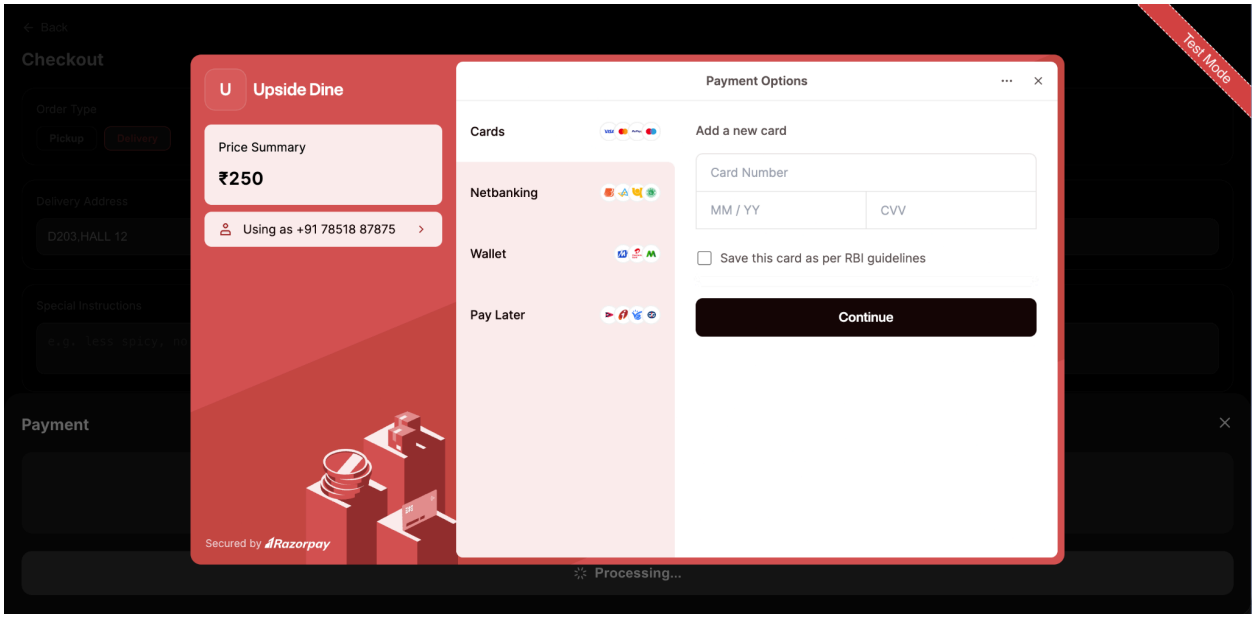
- A **"Continue to Payment"** button is provided.
- Displays the total amount clearly to avoid confusion.





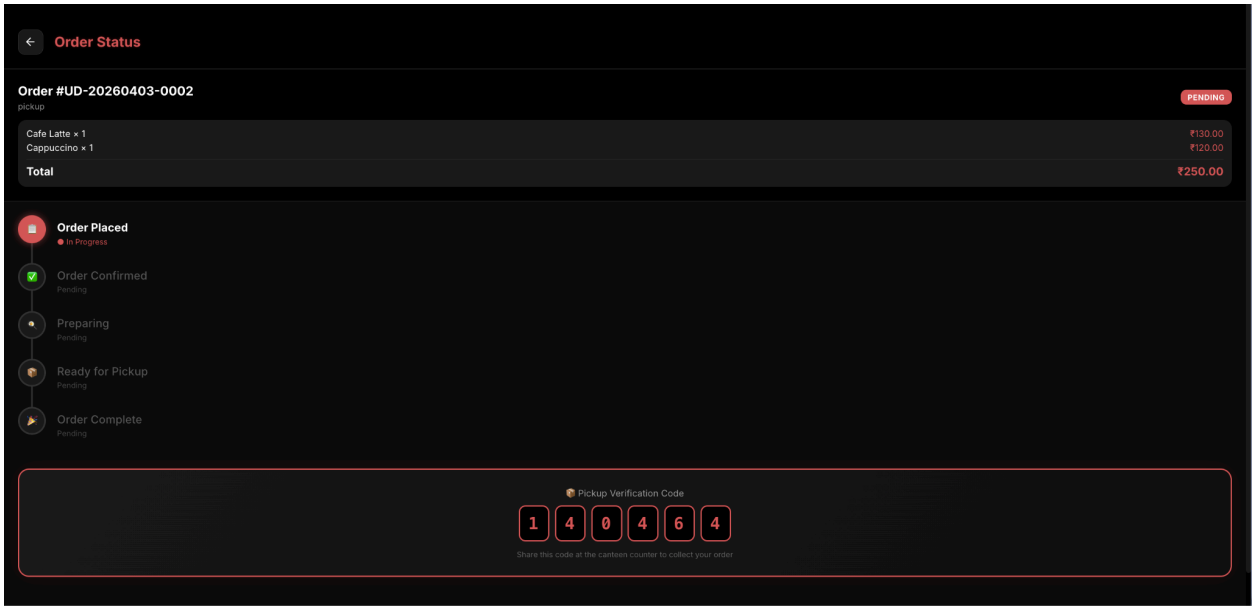
Payment System

- A unified **Payment Window** for:
  - Mess bookings
  - Canteen orders
- Ensures smooth and secure transactions.



Order Tracking

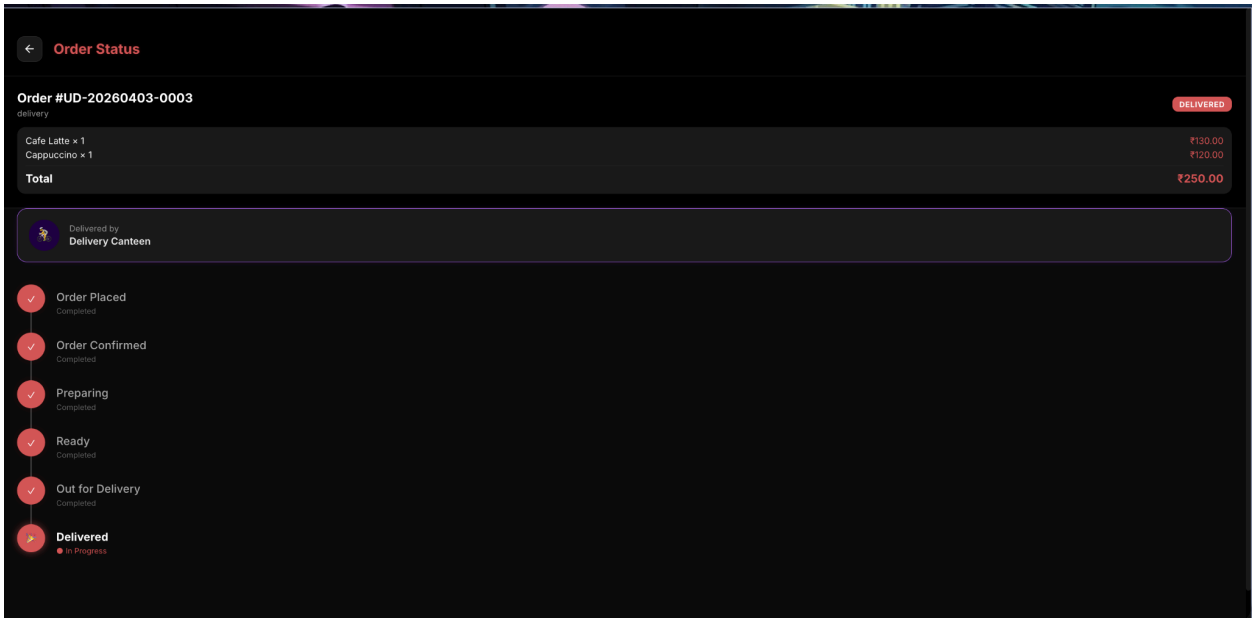
- Students can track their order status in real-time.
- The interface displays:
  - Order ID and item details
  - Total amount
  - Current order status
- Order progress is shown step-by-step:
  - **Order Placed**
  - **Order Confirmed**
  - **Preparing**
  - **Ready for Pickup / Dispatch**
  - **Order Completed**
- A visual progress tracker helps students easily understand the current stage of their order.

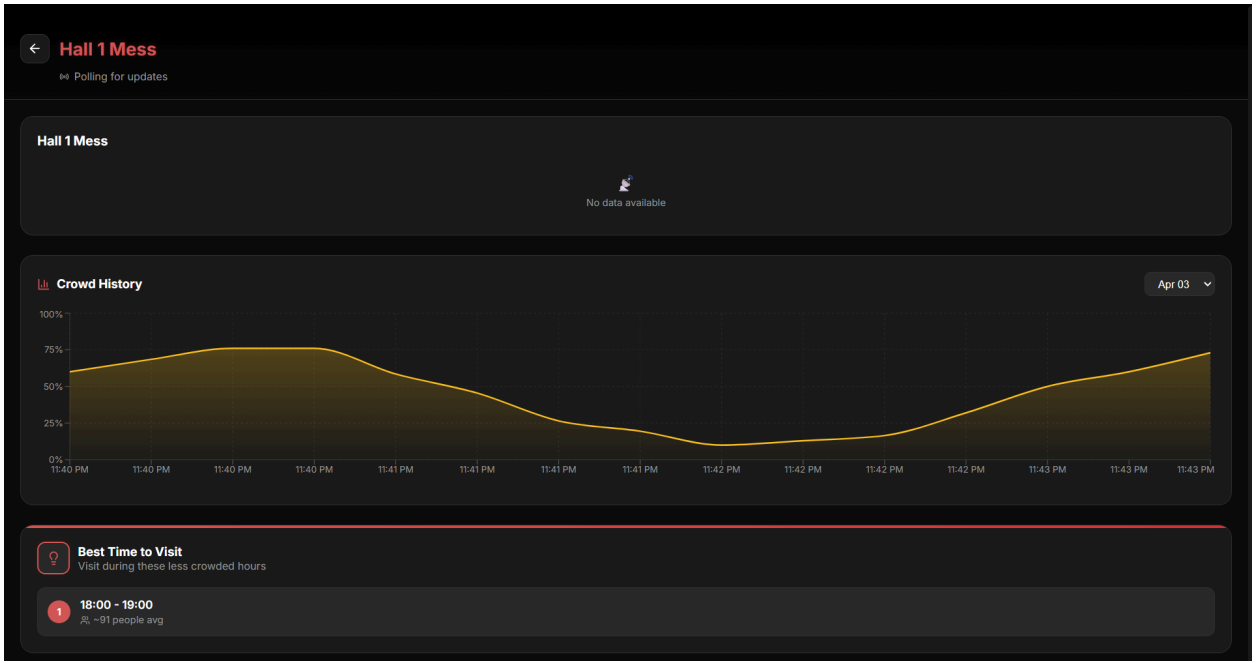


Delivery Updates

Live Delivery Status

- Provides real-time updates after the order is prepared.
- Includes stages such as:
    - **Ready**
    - **Out for Delivery**
    - **Delivered**
- Displays assigned delivery coordinator (if applicable).



Crowd Management System from students->


Students can see live crowds (no of peoples in mess) in mess and can plan when they want to go to mess.
